DO NOT CIRCULATE

1. Production of television tubes at the HF-Werk, Berlin-Oberschoeneweide, was 42,000 pieces in 1951. The production quota for 1952 is 120,000 pieces.*
2. The wire division, the machine shop, the tool division and the electro-plating division of the works until now have carried out production for other plants as well. But the high production goals for 1952 make it impossible for these divisions to take work except for their own plant. The tool Division has been working since the beginning of December on completing the workshop that will be needed for the 1952 production.
3. The purchasing division has been trying more than six months to obtain shears for drawing tungsten, and cannot get any.

25X1A

25X1A

* [redacted] Comment: The information in this paragraph conflicts [redacted] which states that production for the "T-2" program at the HF-Werk for 1951 was 42,000 sets, with 20 tubes per set (840,000 tubes), and that the production plan for 1952 calls for 60,000 sets, with 31 tubes per set (1,860,000 tubes). [redacted] also gives the total tube production at the HF-Werk, outside the "T-2" program, as 1,200,000 in 1951, with 2,400,000 the planned production for 1952.
